Nadine Essayem, DR CNRS, is leader of the group “Sustainable Chemistry: from fundamental to application” at IRCELYON. She has a recognized expertise in heterogeneous acid-base catalysis, heterogeneous catalysis in supercritical fluids, from the design of new catalyst, the characterization of their acido-basic properties and their applications to Lignocellulosic Biomass valorization. She is author of 90 publications, 20 patents. She is in the board of Applied Catalysis A:General, she belongs to the “International Acid-Base Catalysis (ABC) Group” who organizes each 4 years the “International Symposium on Acid-base Catalysis” and she will chair the “4th International Congress on catalysis and Bioraffineries” in 2017 (Lyon).
